(Independent market research; 205 mothers, Germany 2018)

# A LITTLE HELP FOR YOUR WRIST.

## That feels good!

When things get crazy, a little additional safety just feels so good. NUK First Choice+ Baby Bottles with Temperature Control show at a glance when the right drinking temperature is reached.

With Temperature Control, the scale on the bottle changes colour depending on the temperature of the contents. If the food is too hot, the normally blue indicator will turn white. As soon as the contents reach the ideal feeding temperature of 37° celsius, the scale turns a medium-blue colour.

Every NUK First Choice+ Bottle has the original NUK Teat with the NUK Anti-Colic Air System. It ensures a natural flow to help your baby drink without swallowing air. 99%\* of mothers confirm that the NUK First Choice+ Bottle does not cause colic. The teat is modelled on a mother's nipple as she breastfeeds. This gives your baby's tongue and jaw sufficient room for natural sucking movements.

Important: NUK Temperature Control is intended as an additional check. Therefore, the temperature should still be checked manually before actual feeding. To check the temperature of the contents, put a few drops on the inside of your wrist.

## MORE SAFETY

With Temperature Control, the scale on the bottle changes from blue to white if the content is too hot. A little additional safety when things get crazy again.

# EVERYTHING FITS TOGETHER.

The protective cap with its click fastener for hygienic protection and transportation.

The latex teat feels warm and soft, is particularly flexible and tear resistant, with a slight taste of its own.

The silicone teat is particularly resistant to heat and ageing and is odourless and neutral in taste.

The closure disc means no drips when out and about.

The bottle itself is made from either high-quality, hard-wearing plastic or long-lasting borosilicate glass.

**MADE IN GERMANY**

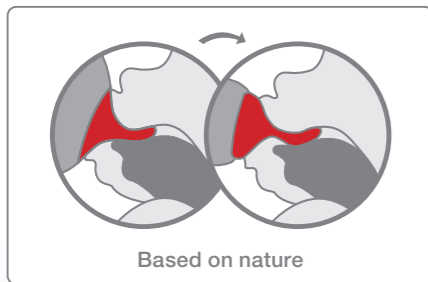

# NUK FIRST CHOICE+ TEAT

## It's the shape that matters.

The mouth plays a crucial role in the healthy overall development of your child. Breathing, feeding, sensory perception – everything calls for perfect interaction between the jaw, palate, tongue and lips. Breastfeeding is exercise for them from birth on.

The unique NUK shape is modelled on a mother's nipple as she breastfeeds. For this, the tongue and the jaw have enough space for free sucking movements.

## NATURAL FEELING

With its soft zone, the tip of the silicone teat nestles optimally against your baby's palate – for a natural feeling while drinking.

## THE ORIGINAL

The original NUK Teat is modelled on a mother's nipple as she breastfeeds. Giving tongue and jaw enough room – and the feeling babies love.

## NO COLIC\*\*

The NUK Anti-Colic Air System ensures a natural flow to help your baby drink without swallowing air. For a happy little tummy.\*\*

# TWO TEAT SIZES AND THREE DIFFERENT HOLE VARIATIONS

## For a perfect fit and optimal drinking speed at every feed.

As a baby's face grows, so does the palate, and so, to ensure the best possible feel in your baby's mouth, NUK offers teats in two different sizes.

To ensure your baby enjoys a relaxed feed for the required amount of time for good oral development, there are NUK teats with different hole variations. A particularly fine one (size S) for thin liquids such as breast milk, first infant formula and tea, and a medium-fine teat (size M) for other milk feeds.

When your baby learns to drink independently (from 6 months), the NUK Flow Control teat can be used. With its Y-opening, it lets your baby control the flow for the first time. No matter what type of feed is in the bottle and how quickly or slowly your baby wants to drink.

# A BOTTLE WITH A SYSTEM.

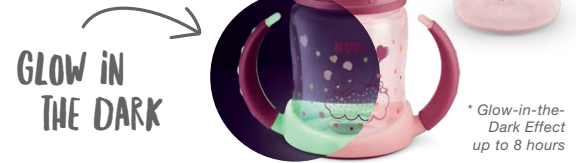

Children develop incredibly quickly. From day to day they can do more and discover the world. The NUK First Choice System keeps up with these development stages. There are different bottles and lids to go with the age and development of your child. And the best thing about them: they can all be combined with each other.

The NUK First Choice+ Baby Bottle starts you off. From 6 months on, the NUK First Choice Learner Bottle with its soft, leakproof silicone spout and two handles for a secure hold encourages independent drinking. Our Active Cup with its soft spout, the Kiddy Cup with its resilient spout and the Flexi Cup with its straw are suitable for children over 12 months. For children over 36 months, there is the Junior Cup (300ml) or the even bigger Sports Cup (450ml), both with push-pull spouts.

# A BRIGHT SPOT IN EVERY NIGHT.

The NUK Cups with Glow-in-the-Dark Effect are easy to find at night. All you need to do is put them under a lamp or in sunlight during the day. The special material will store the energy and emit it as a soft glow which lasts all night long.\*

# ADD A "WOW" TO WATER.

## INTERACTIVE CUP DESIGNS

### This is fun!

There is now something that makes drinking even more fun! The new NUK Cups with Chameleon Effect excite children because the motif on the cup changes when warmed or cooled. You can hardly believe it! Your little ones won't want to let it out of their hands.
